

WE SAVE LIVES! RECLAIM YOURS!

Our Values

Integrity - We take personal responsibility for ensuring the highest standards of professional conduct with each other and our clients.

Diversity - We celebrate the unique differences of all individuals and recognize their unwavering right to respect, dignity, fairness and equality.

Innovation & Excellence - We are committed to continuous improvement by seizing opportunities to exceed expectations and achieve innovative outcomes.

Partnership & Teamwork - We are committed to sustaining effective and harmonious relationships and connections with others in order to achieve mutually beneficial objectives.

Life-long Learning - We view change as an exciting opportunity and embrace opportunities to acquire new knowledge and learn new skills.

Client Centered - We are committed to providing accessible and relevant services to our clients in the communities where we live.

Who We Are

The Ontario Addiction Treatment Centres (OATC) were founded in 1995. Today, OATC services over fifty communities throughout Ontario, treating over ten thousand patients daily. OATC focuses on a model of harm reduction. It promotes the notion that left untreated, drug addiction causes many harmful outcomes including victimization, overdose, incarceration, and even death. Harm reduction principles seek to engage individuals in therapy using a non-judgmental approach in an attempt to motivate individuals to a healthier lifestyle.

Our staff is highly dedicated to ensuring optimal care and great effort is made toward encouraging long term sobriety from all illicit substances.

Mission Statement

Utilizing a multi-disciplinary approach, the Ontario Addiction Treatment Centres is committed to improve the lives of individuals living with the devastating effects of drug addiction, and lessening the adverse impact on families and society as a whole, through the provision of a range of harm reduction and supportive treatment modalities.

Methadone Treatment

Methadone is a liquid long acting opioid medication (lasting 24-36 hours per dose). It is part of a long term and comprehensive maintenance program for opiate dependent clients. The immediate goal is to stabilize you on your methadone dose, promote a sense of well-being and prevent physical withdrawal symptoms. Methadone will significantly decrease your drug cravings, and help you eliminate drug use.

Why should you start on the methadone program?

- A drug free lifestyle
 - A stable personal, social, family and financial life
 - A chance at stable employment
 - Improved self-esteem, self-worth and independence
 - Improved overall quality of life
- For more information please visit our website, www.oatc.ca.

Suboxone Treatment

Suboxone is a combination pill, composed of both buprenorphine and naloxone. You begin Suboxone treatment under the supervision of a doctor. With your first dose, you must be in a moderate state of withdrawal (approx. 2 days without any opiate use). You work with your doctor to reach a dose of Suboxone that works for you.

Why should you start on a Suboxone program?

- No more withdrawal symptoms
- Minimal to no side effects
- No uncontrollable cravings
- Stay free from illicit drug use
- A stable personal, social, family and financial life
